DETAILED ACTION

Information Disclosure Statement

The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

Specification

The disclosure is objected to because of the following informalities: In the specification, on page 4 "1" designates "housing" on line 12, not as shown in the drawing Figure 1.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 7 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 7, the phrase "control circuit is formed by at least one of a controller R1 and two controllers R1 and R2" is confusing and unclear what applicant is claiming.

Claim Rejections - 35 USC § 103

Art Unit: 3721

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nikolich (US 4,522,162) in view of Zieve (US 4,862,043).

Nikolich discloses a hand-guided working tool (20) for driving fastener elements including ~~of~~ one nail, bolts and pin into a substrate, having a voltage source (46) for supplying an electrical circuit including electrical consumers (36, 38, 46, 55, etc.) on the working tool.

Nikolich lacks at least one capacitor as the voltage source. Zieve teaches at least one capacitor (31, 35 banks) as a voltage source connected on the discharge side of the control circuit (34) deemed to comprise electrical consumers. The capacitor of Zieve is deemed to include connection port for an external power source (30) for charging each removable bank of capacitors. Zieve shows capacitor bank (31, 35) as energy storage module.

In view of the teachings of Zieve, it would have been obvious to one skilled in the art to provide the tool of Nikolich with at least one capacitor as the voltage source since the capacitor has the benefit of being recharged rapidly.

Although modified Nikolich fails to disclose the range of capacitance from 5F-10,000F as claimed, it would have been obvious to one skilled in the art to provide the modified tool of Nikolich with capacitors having capacitance in the range of from 5F - 10,000F as desired since it is expedient of the skilled artisan who is concerned with different ranges of capacitance to meet the need of the user.

The examiner takes Official Notice that control circuit is well known to have two or more controllers (resistors).

Conclusion

Refer to attachment for notice of references cited and recommended for consideration based on their disclosure of limitations of the claimed invention.
